

# Fantasy Manual Screen, 238,8 cm (94"), 203 x 126,9 cm, 16:10

GV-FA-P106  
EAN 6939982314062

The motorized projector screens in the Fancy Series are available in a variety of formats in 1:1, 4:3, 16:9 and 16:10 aspect ratios. They can be controlled with an IR remote control or an RS232 / RS485 connection via an RJ12 interface and manually via the push buttons on the chassis. The screens are designed for wall and ceiling mounting as well as suspension from the ceiling. The motor limitation (up, down movement) of the projection screen is set manually with the enclosed tool. New design elements such as the screwless design of the end caps and the patented spring-loaded mechanism for a smooth up and down movement of the screen ensure that the Fancy Series products integrate seamlessly into any interior design.

- Diverse mounting options - Suitable for either wall mounting, ceiling mounting or ceiling hanging. The bracket can slide horizontally at the back of the housing, to match different installation positions

- Limitless Positioning - Due to its mechanism, the screen can be stopped by holding the handle for 3 seconds at the desired position
- Slow Retraction - The low Retraction System allows the screen to retract back slowly within 8 seconds, preventing the safety issue of the lower bar hitting the screen's housing
- Wrinkle Free - When the screen is fully retracted, the positioning system is locked off, so the fabric is not stretched by the internal spring system, thus preventing wrinkles
- Durable fabric with four layer structure including Fiberglass with a stretchness of <1% - Resolution of more than 125 line pairs per mm, for perfect sharpness - Accurate colours due to even distribution of the reflected light - High contrast, great colour
