Safety notes

- When plugging and unplugging the cable, only grasp the plug and do not pull directly on the cable.
- Cables must not be kinked sharply or bent at tight angles, as this can damage the inner wires and lead to failures.
- Make sure that the cables are not under tensile load, as this can damage the insulation and the wires inside the cable.

-
- Ensure that cables are not laid in areas where they can be easily damaged mechanically.
 - Cables should not be used in environments with extremely high or very low temperatures. Observe the product information on the maximum operating temperature of the cable
 - Check cables regularly for visible damage such as cracks, kinks or signs of wear. Defective cables should be replaced immediately to avoid failures, short circuits or even electric shocks.
