

DIGITUS Patch panel fiber optic without front plate 19" 1U, sliding, cable gland PG13, black

DN-96200-BL-P
EAN 5907772595497

The robust housing serves as the foundation for mounting the switch. In addition to DIGITUS switches currently available on the market, there is the option to choose and independently install additional components. We offer a wide range of front panels, connectors, and

multi-core flexible cables. Our products are continuously subjected to quality control and comply with recognized international standards, including those related to fiber optic cabling. This allows us to guarantee the best performance and quality for your network.

Safety notes

- Avoid direct contact with light sources: Fiber optic cables, especially those with active light sources such as lasers (e.g. in optical communication systems), can emit dangerous radiation that can damage eyes. Take care never to look directly into the light of an optical fiber, even if the light source is invisible to the naked eye.
- When working with fiber optic cables, especially during tests or when working with lasers, protective goggles should always be worn to protect against harmful radiation.
- When plugging and unplugging the cable, only grasp the plug and do not pull directly on the cable.
- Do not kink or crush: Fiber optic cables are sensitive to mechanical stress.
- To protect cables from physical damage, they should be laid in special ducts or with protective materials
- Keep cable connectors clean: Fiber optic cables are sensitive to dust and dirt. Even small particles on the connectors can severely impair the signal

- quality.
- Cables should not be used in environments with extremely high or very low temperatures. Observe the product information on the maximum operating temperature of the cable
 - Check cables regularly for visible damage such as cracks, kinks or signs of wear. Defective cables should be replaced immediately.
